superleap x MediBuddy — Your Health Buddy —

Scope of Work

Date 05 March 2026 Created by Manu Mathew

This document has two purposes -
- commercial agreement during the sales process between the client and Superleap,
- the first brief for implementation team before project kickoff

Client Snapshot

MediBuddy is a digital healthcare platform that connects patients with doctors, hospitals, and healthcare services. The company operates a B2C model where patient inquiries are generated through digital marketing campaigns, website forms, WhatsApp campaigns, and inbound call channels. These leads are managed centrally and converted into healthcare journeys such as OPD consultations, IPD admissions, ***surgeries****, and treatments. Multiple internal teams including Care Buddy (CB), Central Scheduling, Clinical Team, and Finance Operations collaborate to manage patient journeys from enquiry to treatment completion.*

Sector / Industry	*Healthcare*
Business Model	☐ *B2B* ✔ *B2C* ☐ *Both*
Operating Cities / Geographies	*Pan-India operations (Headquarters: Bengaluru, India)*
Sales Team Size (at go-live)	*Total seats contracted: 350*
Client Executive Sponsor	*Diwanshu Agarwal, Director - Category & Sales, diwanshu.agarwal@medibuddy.in, 88610 95220*

Client Day-to-Day PoC	*Suman Joshi, Group Manager - Sales Operations, Surgery, suman.joshi@medibuddy.in, 78994 79061*
Current Tools Being Replaced	*Leadsquared & Convin*
Approx. Monthly Lead Volume	*TBD*
Target Go-Live Date	*5 May 2026*
Client ARR	☐ *Standard (<₹25L ACV)* ✔*Growth (₹25L–₹1Cr)* ☐ *Enterprise (>₹1Cr)*

Business Context

	What is broken / painful for this client right now?
#1	*Opportunity management and dependency on external systems on top of LeadSquared like Retool*
#2	*Manual coordination between operational teams managing consultations, treatments, and financial processes.*
#3	*Reporting and overall limitation on system*
#4	*System speed and ease of use*
#5	*The team currently relies on external tools such as Convin for call analysis, which is capped at 12.5 hours of usage per month, limiting their ability to analyse conversations at scale and fully leverage AI for improving sales performance and lead management.*

What triggered this purchase?	*The current system had limitations. They had to use tools like Retool to fetch the distance from the hospital partner to the lead's pincode. Also, Convin is capped at 12.5 hours per month, which limits their ability to conduct unlimited call auditing.*
What won this deal for us?	*Multi object architecture and the fact that the system is future proof and AI native, essentially two systems in one. The custom demo solving one of their use cases also helped build trust.*

	Currently in their LeadSquared system, a form opens for the associate to add the disposition. The associate asks the lead for their pincode and insurance provider. If the data is already available it is used, otherwise the associate collects it during the call. After this, they check Retool to find all MediBuddy hospital partners, identify the relevant hospitals, check the distance from the given pincode, and suggest suitable hospitals to the lead. Once the lead confirms, the associate proceeds to book the appointment. *In the demo, we showed how this entire workflow can be handled through a simple form within the CRM.*
Biggest objection & how resolved	*Data migration and the complexity of their business were initial concerns. They were unsure if we could handle the migration and set up the system within the specified timeline. This was addressed through the expertise we demonstrated in understanding one of their key pain points, solving it through the custom demo, and the consultations conducted thereafter.*
Competitors evaluated	*Zoho*
Their definition of success	*Building an AI-native CRM that provides insights at the overall business level, giving them visibility into what is happening on the ground. On the Voice AI module side, they expect detailed reports and analytics. They are also looking to reduce the ramp-up time for new agents, which currently takes around three months due to the complexity of the business.*

Objective

The CRM implementation will centralise patient lead inflow from marketing, digital, and inbound channels. It will automate lead assignment, follow-ups, reminders, and communication workflows while providing operational visibility into patient journeys, conversions, team performance, and source-level metrics.

The objective is to understand their existing systems and processes and build a system that solves the current complexity of their business. One of the key objectives is also to ensure that the relevant CRM data can be pushed to their internal database through a data lake connector or any preferred alternative integration method.

Solution Scope

1 - Sales Process

Lead Sources

- ✔ Website forms
- ✔ Google Ads
- ✔ Walk-ins / Events (manual entry)
- ✔ CSV / Bulk import
- ✔ Internal ERP / Middleware
- ✔ Meta Ads (Facebook / Instagram)
- ✔ WhatsApp Business API
- ✔ Referrals / Organic
- ✔ Inbound calls / IVR / Telephony
- ✔ Missed Call Campaigns

Lead Stages & Pipeline

Example stages mentioned:

New - Contacted - Consultation Booked - Follow-up - Converted / Lost

Opportunity represents a specific healthcare journey such as:

- *OPD consultation*
- *IPD admission*
- *Surgery*
- *Treatment*

Activities, communications, tasks, and documents are linked at:

- *Lead level*
- *Opportunity level (mandatory)*

Assignment Logic

Assignment Type	✔ Round robin ✔ Territory-based ✔ Skill / attribute matching ✔ Manual by manager
Specifics / Notes	*Lead assignment can occur through round robin distribution or attribute-based matching.* *Fallback routing is triggered if assigned agents are inactive.* *Managers or administrators can manually assign or reassign leads when required.*

Disposition Logic & Follow-up Actions

Agents must record call disposition after every interaction.

Activities recorded include:

- *Inbound and outbound calls*
- *WhatsApp messages*
- *Emails*
- *Notes*
- *Stage and status changes*
- *Document uploads*
- *Automation-triggered events*

Tasks and reminders include:

- *Task creation at lead and opportunity level*
- *Tasks for follow-ups, document requests, appointment confirmation, and internal reviews*
- *Auto task creation on stage change, status change, or inactivity thresholds*
- *Notification and UI reminders for pending tasks*

Need to explore more

Key Automation Workflows

Automation Workflow	Trigger Condition	Action
Lead Distribution	*Lead is created in the system*	*Automatically assign the lead to an agent based on configured distribution rules*
Stage / Status Automation	*Opportunity stage or status is updated*	*updated* *Trigger configured automation workflows such as notifications, task creation, or field updates*
Task Creation on Stage Change	*Opportunity stage changes*	*Automatically create predefined tasks for the assigned user*
Communication Triggers	*Opportunity stage changes*	*Send predefined communication via WhatsApp or email*

Automation Workflow	Trigger Condition	Action
Field-Based Automation	*Specific field value is updated*	*Execute configured automation rules such as field updates or workflow triggers*
Inactivity Follow-up	*No activity on a lead or opportunity for a defined period*	*Trigger follow-up reminders or task creation*

2 - Team Structure

Org Hierarchy

- *Admin*
- *Leadership*
- *Care Buddy (CB)*
- *Central Scheduling*
- *Clinical Team*
- *Finance Operations*

Role Types & Day-to-Day Workflow

Role	What they do in the CRM / Key workflows
Care Buddy (CB)	*Engages with patient leads and updates opportunity records*
Central Scheduling	*Manages consultation scheduling and appointment coordination*
Clinical Team	*Manages treatment coordination and clinical updates*
Finance Operations	*Tracks payment-related information and updates*

Access & Permissions

- *All teams can view full records of their specific teams based on hierarchy*
- *Edit access restricted by section and field*
- *Role-based access controls implemented*

- *Data masking and visibility restrictions configurable based on role*

3 - Reporting & Visibility

What does the sales head review every morning?	• *Payment Data* • *Opportunity count and stage-wise distribution* • *Qualified leads and follow-up status* • *Agent-wise performance metrics* • *Connected vs not connected call statistics* • *SLA breaches and pending tasks* • *Source-wise funnel performance*
What does the CEO / founder want to see weekly?	• *Overall opportunity pipeline and conversions* • *GMV generated* • *Source-wise lead performance and ROI* • *OPD completed and IPD completed metrics* • *Agent productivity and team performance trends* • *Stage-wise pipeline distribution*
Reports that must be replicated from current system	*Not specified*
Reports they wish existed but currently don't	*Not specified*
Who gets access to which reports?	• *Care Buddy (CB): Access to their own leads, opportunities, activities, and performance metrics* • *Team Leads / Managers: Access to performance reports and pipeline data for their teams* • *Operations Leadership: Access to cross-team operational reports and SLA monitoring* • *Admin: Full access to all reporting dashboards and analytics across teams*

4 - Mobile App

Field team in scope?	☐ *Yes* ✔ *No*
User stories / key workflows on mobile	*Not specified, need to explore. Mobile is part of this deployment*

Any feature concerns or risks flagged?	

5 - AI Voice Intelligence

Voice Intelligence in scope?	✔ *Yes* ☐ *No* ☐ *Phase 2*
IVR / Telephony partner	*Exotel & Ameyo*
Primary language(s) of calls	*Not specified - Pan India Operations*
Call analysis parameters discussed	*Pitch score, talk ratio, win probability, auto-fill disposition fields, violations and reports on top of this for visibility*
SuperAgents (Voice Bots) in scope?	☐ *Yes - go-live* ☐ *Yes - Phase 2* ☐ *No* ✔ *Not discussed* *There is scope here.*
SuperAgents use case	*e.g. Inbound call handling, outbound follow-up, qualification bot*

6 - Additional & Custom Requirements

- *Document capture linked to opportunities*
- *Document storage with permission control*
- *File merging into single PDF*
- *PDF generation from form fields*
- *Document intelligence (optional) for reading medical documents and extracting metadata*
- *Centralised master data for doctors, clinics, treatments, symptoms, and locations*
- *Global search across custom fields*
- *Real-time process tracking*
- *Trigger-based reminders*

Integrations

Integration / System	Category	Go-Live Critical?	Status / Notes
Website Forms	Lead Source	✔ Yes ☐ Phase 2 ☐ TBD	API integration
Google Ads	Lead Source	✔ Yes ☐ Phase 2 ☐ TBD	Performance marketing
Social Media APIs	Lead Source	✔ Yes ☐ Phase 2 ☐ TBD	Facebook / Instagram
WhatsApp Business API	Communications	✔ Yes ☐ Phase 2 ☐ TBD	Two-way messaging
Exotel	Telephony / IVR	✔ Yes ☐ Phase 2 ☐ TBD	Call centre integration
Ameyo	Telephony / IVR	✔ Yes ☐ Phase 2 ☐ TBD	Call logging and call outcome tracking (Need to dive into this more)
Email Integration	Communications	✔ Yes ☐ Phase 2 ☐ TBD	Email communication and notifications
Internal system	Other	✔ Yes ☐ Phase 2 ☐ TBD	Single source of truth for cities, pincodes, latitude & longitude, treatments, conditions, symptoms, doctors, clinics, providers, zones.
Payments (TBD)	Payments	☐ Yes ☐ Phase 2 ✔ TBD	Payment tracking in the activity timeline and payment schedules/status tracking

Data Migration

Migration required?	✔ *Yes* ☐ *No* ☐ *To be scoped at kickoff*
Source system(s)	*Leadsquared*
Data types to migrate	*Active leads, historical leads, contacts, call logs*

Estimated volume	*Not specified*
Data quality	☐ *Clean and structured* ✔ *Needs cleanup/deduplication* ☐ *Unknown*
Migration owner (client side)	*Punit Yadav, Product Manager, punit.yadav@medibuddy.in, 70467229984*

What We Are Not Doing

There was a discussion with their CTO about real-time pitch assist during the call but we clarified that it is a telephony blocker and we are open to integrate if a telephony solution exists.

Also, there was discussion around using collective intelligence from let's say last 20k calls. We don't have a feature right now but we should build it, sounds relevant and good for Superleap platform also.

Risks & Dependencies

- Third-party integrations (telephony, WhatsApp API, payment gateways) carry timeline risk. Their API availability and approval timelines are outside Superleap's control.
- Discovery calls may surface new requirements or modify scope highlighted here. Changes will be managed through the Change Order process after Configuration Blueprint sign-off.
- Data migration timelines depend on the client providing clean data in the agreed format by the agreed date.
- Go-live timeline assumes the Client Executive Sponsor and Client PoC are available for discovery sessions and approvals within the agreed schedule.
- The current LeadSquared contract is expiring in the last week of April 2026. Since their existing instance will be going off, implementation, migration and go-live will need close coordination to ensure there is no disruption to lead management and operations.

Client-Specific Risks

MediBuddy operates a complex business process involving multiple healthcare journeys such as OPD, IPD, surgeries, and treatments. Understanding the end-to-end workflows across these product lines may require deeper discovery during implementation.

Multiple internal teams (Care Buddy, Central Scheduling, Clinical, and Finance Operations) are involved in the patient lifecycle, which may require careful alignment of workflows, permissions, and process ownership during configuration.
